

PRÁCTICA 5 API Rest en Heroku

- Ciclo formativo: 2º ASIR
- Módulo: GBDLI
- Fecha de entrega de la práctica: 10/01/2022
- Nombre y apellidos: Daniel Muñoz Núñez

Índice de contenido

1) Primeros Pasos.....	3
2) Subir a Github, a heroku y conexión mongo.....	5
3) Prueba en producción.....	13

1) Primeros Pasos

En esta práctica vamos a crear una API rest que será una parte fundamental de nuestro proyecto final ya que se encargará de gestionar las conexiones a nuestra base de datos en la nube.

En este punto mostraremos los primeros pasos necesarios para la creación del proyecto.

```
// iniciar proyecto node.js para crear el package.json  
npm init -y
```

```
// instalar typescript local si no se instaló global  
npm i typescript --save-dev //Local  
npm i typescript -g //Global
```

```
// Iniciar proyecto typescript para crear el tsconfig.json  
tsc --init //Si global. Se crea el tsconfig.json  
npm tsc --init //Si local. Se crea el tsconfig.json
```

```
// Para crear el repositorio local  
git init
```

```
// Cambiamos la configuración del tsconfig.json  
"target": "es6",  
"outDir": "./build",
```

//Cambiamos el package.json de la siguiente forma:

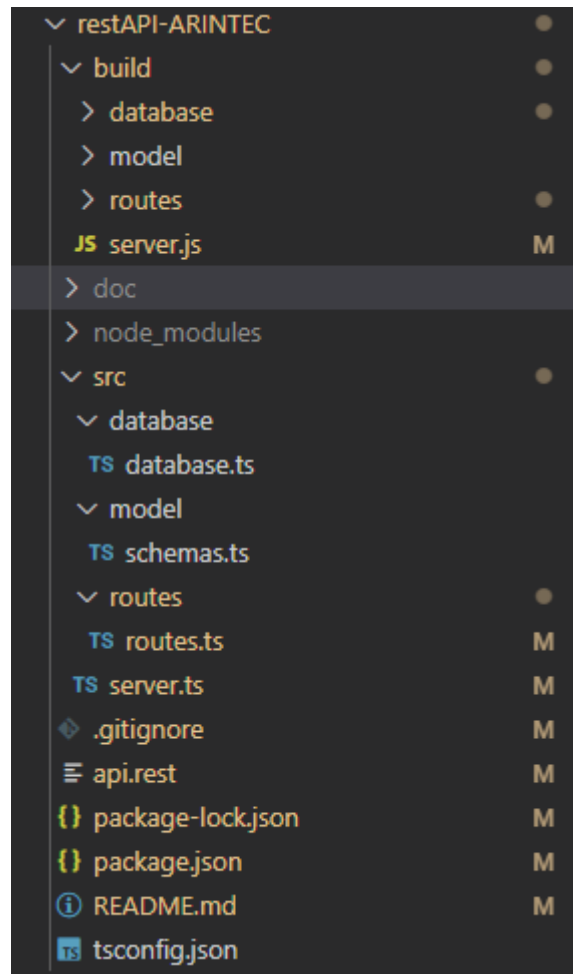

```
"scripts": {  
  "ts": "tsc -w",  
  "dev": "nodemon ./build/server.js",  
  "start": "node ./build/server.js"  
}
```

```
// Instalación de express, mongoose y morgan  
npm i express mongoose morgan
```

```
// Instalamos los tipos de datos y módulos de desarrollo  
npm install @types/node @types/mongoose @types/express @types/morgan nodemon  
typescript -D
```

```
// Configuramos el .gitignore con:  
node_modules
```

Una vez completado todos estos pasos la estructura de nuestra API rest quedaría así:

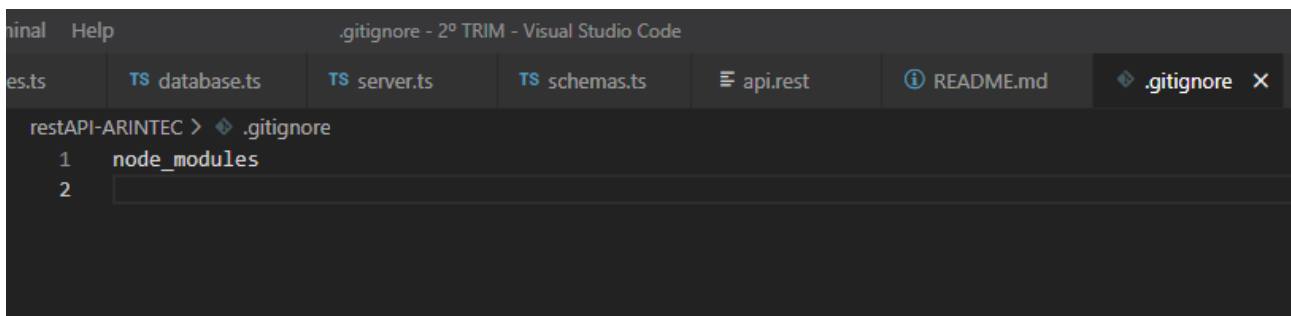

2) Subir a Github, a heroku y conexión mongo

Para poder ejecutar nuestra API en heroku primero tendremos que subirla a github y posteriormente enlazar heroku con nuestro repositorio, a continuación se detallan los pasos:

En primer lugar debemos crear un nuevo repositorio público vacío y sin readme en nuestra cuenta de github, de nombre **restAPI-ARINTEC**

En segundo lugar, ya en nuestro proyecto en local, debemos incluir en el gitignore la carpeta **/node_modules** ya que heroku se encargará de compilar la aplicación y de crear dicha carpeta, sin embargo la carpeta **/build** se debe subir ya que si no la aplicación no funcionaría.

The screenshot shows the Visual Studio Code editor with the `.gitignore` file open. The file contains the following content:

```
restAPI-ARINTEC > .gitignore
1  node_modules
2
```

Posteriormente debemos ejecutar en orden los siguientes comandos para subir nuestra API a Github, los comandos son los mismos que en prácticas anteriores:

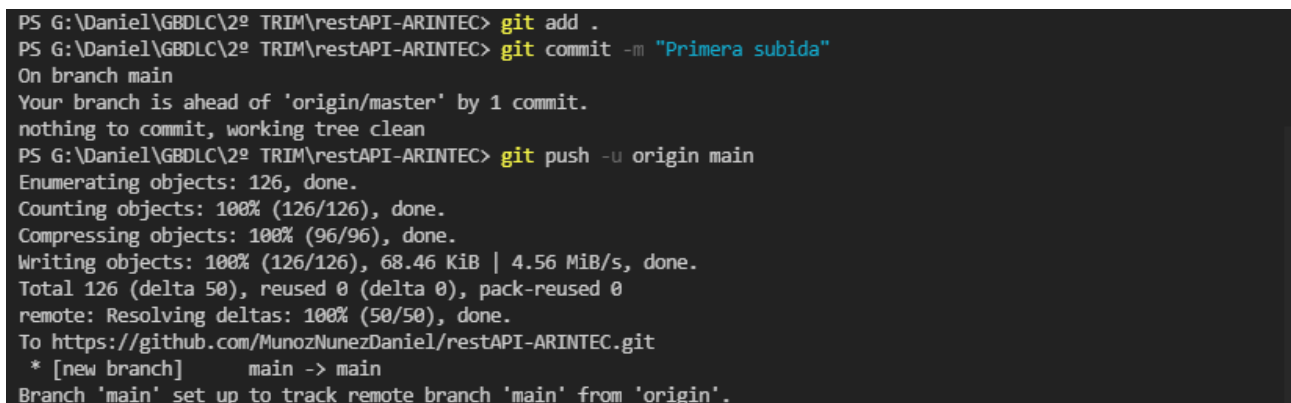

git init

git add .

git commit -m "primera subida"

git remote set-url origin https://github.com/MunozNunezDaniel/restAPI-ARINTEC.git

git push -u origin main

The screenshot shows a terminal window with the following output:

```
PS G:\Daniel\GBDLC\2º TRIM\restAPI-ARINTEC> git add .
PS G:\Daniel\GBDLC\2º TRIM\restAPI-ARINTEC> git commit -m "Primera subida"
On branch main
Your branch is ahead of 'origin/master' by 1 commit.
nothing to commit, working tree clean
PS G:\Daniel\GBDLC\2º TRIM\restAPI-ARINTEC> git push -u origin main
Enumerating objects: 126, done.

To https://github.com/MunozNunezDaniel/restAPI-ARINTEC.git
 * [new branch]      main -> main
Branch 'main' set up to track remote branch 'main' from 'origin'.
```

De esta forma ya lo tendremos subido a github.

The screenshot shows a web browser with multiple tabs open. The active tab is the GitHub repository page for 'MunozNunezDaniel / restAPI-ARINTEC'. The page is in dark mode. At the top, there's a navigation bar with the GitHub logo, a search bar, and links for Pull requests, Issues, Marketplace, and Explore. Below this, the repository name 'MunozNunezDaniel / restAPI-ARINTEC' is displayed, along with buttons for 'Unwatch', 'Fork', and 'Star'. The repository is public and has 1 branch and 0 tags. A table lists the files and folders in the repository, including 'build', 'doc', 'src', '.gitignore', 'README.md', 'api.rest', 'package-lock.json', 'package.json', and 'tsconfig.json'. The 'README.md' file is selected, showing its content. The content of the README includes the title 'Practica05 API Rest: Tienda de informática', the author's name 'Daniel Muñoz Nuñez', and a description of the project: 'En esta práctica crearemos una API rest que será una parte fundamental de nuestro proyecto final ya que se encargará de gestionar las conexiones a nuestra base de datos en la nube, el proyecto final se basará en una tienda de informatica con dos colecciones: ordenadores y compradores'. On the right side of the repository page, there are sections for 'About', 'Releases', 'Packages', and 'Languages'. The 'Languages' section shows a bar chart with JavaScript at 57.3% and TypeScript at 42.7%.

Ahora tendremos que ingresar en nuestra cuenta de heroku y crear una nueva aplicación.

Elegimos la región de europa

Una vez creada la aplicación la enlazamos con nuestro repositorio de github

The screenshot shows the Heroku dashboard for the application 'restapi-arintec'. The browser address bar shows 'dashboard.heroku.com/apps/restapi-arintec/deploy/github'. A notification at the top states: 'La extensión actualizada necesita permisos adicionales. Ve al administrador de extensiones para aceptar la actualización.' with a link 'Ir a extensiones'.

The dashboard header includes the Heroku logo, a search bar 'Jump to Favorites, Apps, Pipelines, Spaces...', and user information 'Personal > restapi-arintec' with 'Open app' and 'More' buttons.

The main navigation bar includes: Overview, Resources, **Deploy**, Metrics, Activity, Access, and Settings.

The 'Deploy' section is titled 'Add this app to a pipeline'. It contains two columns of information:

- Left Column:** 'Add this app to a pipeline'. Text: 'Create a new pipeline or choose an existing one and add this app to a stage in it.'
- Right Column:** 'Add this app to a stage in a pipeline to enable additional features'. It includes two sub-sections:
 - Pipelines:** 'Pipelines let you connect multiple apps together and promote code between them. [Learn more.](#)'
 - GitHub Integration:** 'Pipelines connected to GitHub can enable review apps, and create apps for new pull requests. [Learn more.](#)'

Below this information is a dropdown menu labeled 'Choose a pipeline'.

The 'Deployment method' section shows three options:

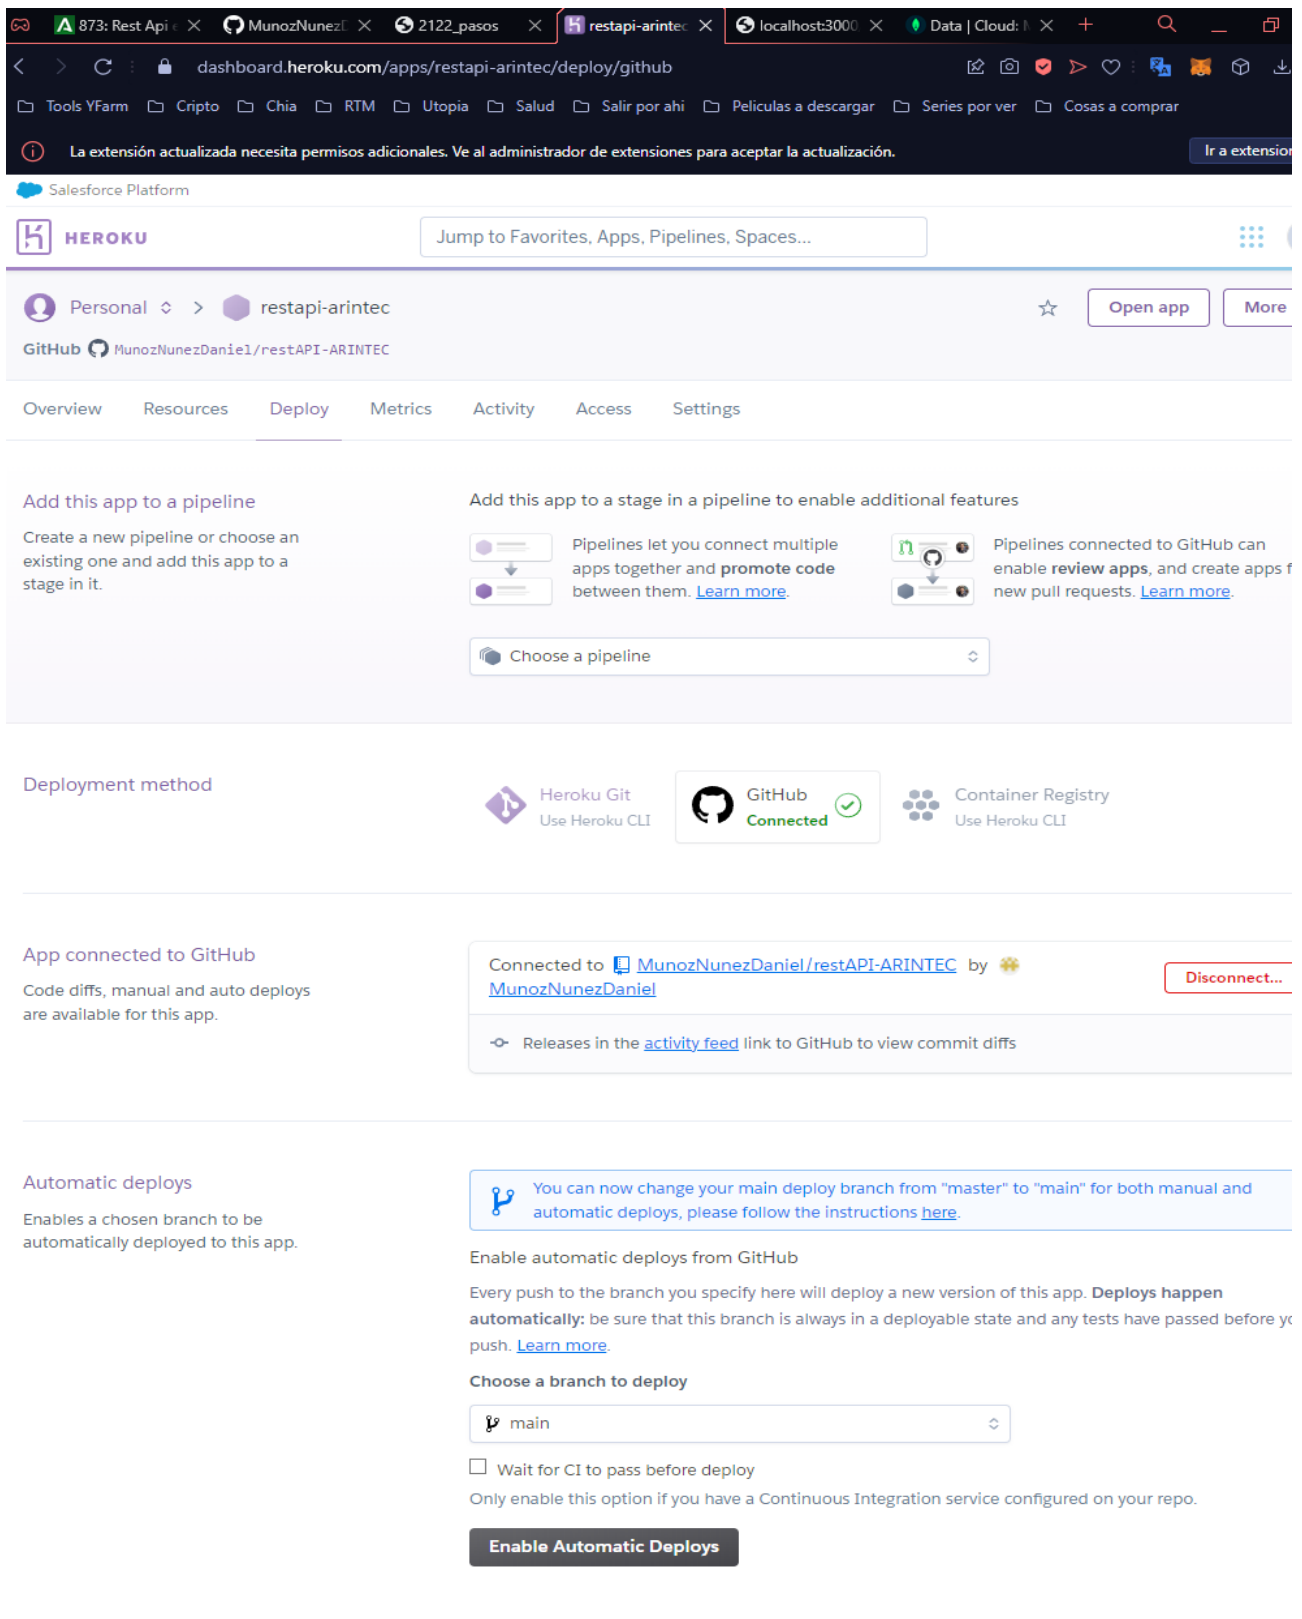

- Heroku Git:** Use Heroku CLI
- GitHub:** Connect to GitHub
- Container Registry:** Use Heroku CLI

The 'Connect to GitHub' section includes the text: 'Connect this app to GitHub to enable code diffs and deploys.' Below this is a search bar with the text 'Search for a repository to connect to'. The search bar contains 'MunozNunezDaniel' in the dropdown and 'restAPI-ARINTEC' in the input field, with a 'Search' button.

Below the search bar, it says: 'Missing a GitHub organization? [Ensure Heroku Dashboard has team access.](#)'

At the bottom, it shows the repository 'MunozNunezDaniel/restAPI-ARINTEC' with a 'Connect' button.

Posteriormente una vez enlazada activamos el **automatic deploys** para que no tengamos que volver a desplegar la aplicación desde heroku CLI

La extensión actualizada necesita permisos adicionales. Ve al administrador de extensiones para aceptar la actualización. [Ir a extensión](#)

Automatic deploys
Enables a chosen branch to be automatically deployed to this app.

You can now change your main deploy branch from "master" to "main" for both manual and automatic deploys, please follow the instructions [here](#).

Enable automatic deploys from GitHub
Every push to the branch you specify here will deploy a new version of this app. **Deploys happen automatically:** be sure that this branch is always in a deployable state and any tests have passed before your push. [Learn more.](#)

Choose a branch to deploy

main

☐ Wait for CI to pass before deploy
Only enable this option if you have a Continuous Integration service configured on your repo.

Enable Automatic Deploys

Ahora vamos a crear un usuario con privilegios de administrador en nuestro mongoDB para acceder con el desde nuestra API a las colecciones de la Base de datos.

The screenshot shows the 'Edit User' modal in the MongoDB Atlas web interface. The user being edited is 'usuario1@admin'. The 'Authentication Method' is set to 'Password'. The 'Database User Privileges' section shows that the 'Atlas admin' built-in role is selected. The 'Restrict Access to Specific Clusters/Data Lakes' toggle is currently turned off.

cloud.mongodb.com/v2/6059a47243e0fe412984b66e#security/database/users

Tools YFarm | Cripto | Chia | RTM | Utopia | Salud | Salir por ahí | Películas a descargar | Series por ver | Cosas a comprar

La extensión actualizada necesita permisos adicionales. Ve al administrador de extensiones para aceptar la actualización.

Edit User: usuario1@admin

Update a database user to grant an application or user, access to databases and collections in your clusters in this Atlas project. Granular access control can be configured with default privileges or custom roles. You can grant access to an Atlas project or organization using the corresponding [Access Manager](#).

Authentication Method

Password | Certificate | AWS IAM (MongoDB 4.4 and up)

MongoDB uses [SCRAM](#) as its default authentication method.

Password Authentication

usuario1

Edit Password

Database User Privileges

For advanced role based access control, you can apply your own custom roles or add specific privileges to this user. You can combine these role types with a built-in role. A user will gain access to all actions within the roles assigned to them, not just the actions those roles share in common. **You must choose at least one role or privilege.** [Learn more about roles.](#)

Built-in Role

1 SELECTED

Select one [built-in role](#) for this user.

Atlas admin

Custom Roles

Select your [pre-defined custom role\(s\)](#). Create a custom role in the [Custom Roles](#) tab.

Specific Privileges

Select multiple privileges and what database and collection they are associated with. Leaving collection blank will grant this role for all collections in the database.

Restrict Access to Specific Clusters/Data Lakes

Enable to specify the resources this user can access. By default, all resources in this project are accessible. ☐ OFF

Cancel | Update User

cloud.mongodb.com/v2/6059a47243e0fe412984b66e#clusters/connect?clusterId=Cluster0

Tools YFarm Cripto Chia RTM Utopia Salud Salir por ahi Peliculas a descargar Series por ver Cosas a comprar

La extensión actualizada necesita permisos adicionales. Ve al administrador de extensiones para aceptar la actualización.

Connect to Cluster0

✓ Setup connection security > ✓ Choose a connection method > Connect

1 Select your driver and version

DRIVER VERSION

Node.js 4.0 or later

2 Add your connection string into your application code

☐ Include full driver code example

```
mongodb+srv://<username>:<password>@cluster0.49asp.mongodb.net/myFirstDatabase?
retryWrites=true&w=majority
```

Replace **<password>** with the password for the **<username>** user. Replace **myFirstDatabase** with the name of the database that connections will use by default. Ensure any option params are [URL encoded](#).

Having trouble connecting? [View our troubleshooting documentation](#)

Go Back Close

```

The screenshot displays the Postman application interface. At the top, there's a blue header bar with the Postman logo and menu items: File, Edit, View, Help. Below this is a navigation bar with Home, Workspaces, Reports, and Explore. A search bar labeled 'Search Postman' is present. On the right of the navigation bar are icons for cloud sync, a bell, a gear, and buttons for 'Sign In' and 'Create Account'.

A yellow banner across the top of the main workspace reads 'Working locally in Scratch Pad. Switch to a Workspace'. Below this, the 'Scratch Pad' section has 'New' and 'Import' buttons. The left sidebar shows a 'Collections' panel with a message: 'You don't have any collections. Collections let you group related requests, making them easier to access and run. Create Collection'. The sidebar also lists 'APIs', 'Environments', 'Mock Servers', 'Monitors', and 'History'.

The main workspace shows a REST client request configuration. The URL is 'https://restapi-arintec.herokuapp.com/ordenadorN'. The method is 'POST'. The request body is in JSON format, containing the following data:

```
1 {
2   "modelo": "Lenovo-h7",
3   "fecha_montaje": "2020-01-01",
4   "fecha_garantia": "2023-04-09",
5   "precio_del_pc": 1500,
6   "cantidad": 1,
7   "RAM": 24,
8   "disco_duro": "2TB",
9   "tipo": "Portatil",
10  "comprador": "Corte ingles"
11 }
```

The response is shown in the bottom panel, formatted as JSON. It includes a status of 200 OK, a response time of 511 ms, and a body size of 768 B. The response data is:

```
1 {
2   "_id": "61db50dd2466b9001678510e",
3   "_modelo": "Lenovo-h7",
4   "_fecha_montaje": "2020-01-01T00:00:00.000Z",
5   "_fecha_garantia": "2023-04-09T00:00:00.000Z",
6   "_precio_del_pc": 1500,
7   "_cantidad": 1,
8   "_RAM": 24,
9   "_disco_duro": "2TB",
10  "_comprador": "Corte ingles",
